DIRECTIONS: In questions 14 to 17 you will be asked about the overall meaning and organization of TEXT 1 as well as specific details or facts stated in it. Read TEXT 1 and all the answer alternatives carefully. Choose the best possible answer on the basis of what is written in TEXT 1.

TEXT 1

Augmented reality adds a layer of information on top of everything in front of your eyes. How? By making you wear glasses that have tiny video cameras in them. These cameras “see” the world on your behalf and livestream it to the inside of your glasses. You feel like you’re watching the world through transparent glasses, but in fact you’re seeing a movie of the scene in front of your eyes. You could run around the whole day and never notice the difference between wearing these glasses and not wearing them: the glasses show you an exact replica of what your eyes would see. However, the advantage of having glasses is that now you can add software intelligence to them. These glasses can recognize an object in front of your eyes using image recognition software, search the Internet for information on that object and add it to the image display you see. The process of “recognize, search, add” is almost instantaneous.

One can immediately see the value of augmented content. Just imagine being a tourist in Paris and having a quick history of the Eiffel Tower displayed next to it. You’d never need holiday guidebooks like Lonely Planet again! The potential to transform the experience of education is full of promise. Instead of just reading about dinosaurs, your children could actually see small 3D dinosaurs walking on the table in front of them. But having augmented reality also has its cons. If a customer walks in a store and is identified by the store assistant’s augmented reality glasses as being behind on his bills, the store could refuse selling to him.

Comentários:

14. The text states that

- a) cameras in glasses make augmented reality possible.
- b) people who wear glasses see their reality augmented.
- c) augmented reality makes you run around the whole day.
- d) transparent glasses are used to see a replica of the world.
- e) movie scenes can be augmented with no need for glasses.

15. An advantage of augmented reality mentioned in the text is that you do not need to

- a) travel to Paris to see the Eiffel Tower next to you.
- b) make your children read books for their education.
- c) use software to search the Internet for information.
- d) have any object in front of your eyes to recognize it.
- e) take guidebooks with you to have instant information.

16. A disadvantage of augmented reality applications mentioned in the text is that they can

- a) see people's world on their behalf.
- b) make children see dangerous things.
- c) display the cons of identified people.
- d) transform an experience into a replica.
- e) have value in tourism and education only.

17. Lonely Planet is mentioned because it may

- a) transform the experience of education.
- b) provide quick information to children.
- c) display augmented content for tourists.
- d) be unnecessary with augmented reality.
- e) make people see a replica of tourist places.

18. INSTEAD OF (line 12)

- A) In favour of.
- B) In place of.
- C) In spite of.
- D) In view of.
- E) In case of.

19. BEHIND (line 15)

- A) late.
- B) ahead.
- C) careful.
- D) current.
- E) cheated.

20. "You feel like you're watching the world through transparent glasses, but in fact you 're seeing a movie of the scene in front of your eyes." (lines 3-4)

- A) Although you feel you're watching the world through transparent glasses and like it, you're in fact seeing a movie of the scene in front of your eyes.
- B) Instead of seeing in fact a movie of the scene in front of your eyes, you feel like you 're watching the world through transparent glasses.
- C) You like the feeling of watching the world through transparent glasses, but in fact you're seeing a movie of the scene in front of your eyes.
- D) While you're seeing a movie you like in front of your eyes, you feel in fact you're watching the world through transparent glasses.
- E) You feel as if you're watching the world through transparent glasses, though in fact you 're seeing : movie of the scene in front of your eyes.

21. "One can immediately see the value of augmented content." (line 10)

- A) One content can be seen being augmented immediately.
- B) The augmented content can be seen immediately valued.
- C) One can see the value of immediately augmented content.
- D) The value of augmented content can immediately be seen.
- E) The value of augmented content is the only thing to be seen.
